

Extramel® superoxide dismutase from French melon concentrate (Robertet)

What is it?

Extramel® is a proprietary cantaloupe melon concentrate rich in superoxide dismutase, a powerful antioxidant enzyme that helps counteract oxidative stress within the body. (<https://www.robertet.com/extramel-le-secret-dune-sante-renforcee-grace-a-la-superoxide-dismutase-sod/>) Oxidative stress causes cell damage and is thought to play a role in many health conditions. Because of the unique nature of the concentrate and its protective coating, a very small dosage (only 10 mg) is required, thus making it a safe and easy choice for formulating into functional foods and supplements.

What benefits does it offer?

Extramel® helps support reduction in stress levels and mental and physical fatigue. Research has shown a link exists between oxidative stress and psychological stress. Two clinical trials with over 60 participants showed significant reductions in perceived stress versus a placebo coupled with improved quality of life survey scores. Extramel® helps support the body to work against free radical precursors more efficiently than other traditional antioxidants like vitamins and minerals.
